

# MONADNOCK SPEEDWAY TRANSPONDER LOCATION AND INFORMATION

The transponder, in all divisions, must be mounted inside the driver's compartment on the right side of the center roll bar (equal distance from the center roll bar to the "passenger" side window). The transponder must be on a lexan mount extended down from the roof. The transponder must be mounted so the numbers are facing out and centered out of the "passenger" side window. Please be sure that the transponder is not too high (close to roof), it is more than an inch away from metal and is not angled. Below are the following measurements for mounting:

Mini Stocks – The transponder must be located 94" from the farthest point forward of the bumper cover to the center of the transponder located inside the drivers compartment.

Strictly Stocks - The transponder must be located 100" from the farthest point forward of the bumper cover to the center of the transmitter located inside the drivers compartment.

Late Models & Pro Stocks - The transponder must be located 108" from the farthest point forward of the bumper cover to the center of the transmitter located inside the drivers compartment.

The transmitters are operated by either a 9-volt battery (must be name brand – **RECHARGABLE BATTERIES NOT ALLOWED**) or a DB Com Hardwire kit available. The management of Monadnock Speedway strongly encourages competitors to purchase the hardwire (which connects to the ignition) to eliminate the weekly changing of the battery and costs. If interested in the hardwire kit, please call the speedway.

Important Instructions for the proper care of the transponder: **THE SPEEDWAY IS NOT RESPONSIBLE FOR IMPROPER CARE OF THE TRANSPONDER. IF YOUR TRANSPONDER IS DAMAGED, IT IS YOUR RESPONSIBILITY TO PAY FOR THE REPAIRS OR THE COST OF NEW ONE.**

1. Do Not Expose the transponder outside of the driver's compartment, secure tightly inside driver's compartment.
2. Do Not Expose the transponder to inclement weather (rain or snow)
3. Do Not Place it next to metal. Must be more than inch away from any metal and mounted on Lexan.

The speedway is not responsible for improper care of the transponder. Competitors must have a transponder to compete. New competitor may call the office for purchasing information (603-239-4067). If your transponder was exposed to rain or any other damage, the speedway will send it to be re-calibrated. The competitor will be responsible for the cost of repair.

The Transponder can be returned to the management of Monadnock Speedway and sold on Consignment. **For new competitors, used transponders may be available. Please call the office if interested in purchasing a used transponder.**
